

**The World is microbial**

# ...and so are we

# Getting the data

[https://github.com/surh/scip\\_barplot](https://github.com/surh/scip_barplot)

abundance

sample

OTU taxonomy

# Sample metadata

<b>Phylum</b>	<b>mean abundance</b>
Proteobacteria	35.40%
Actinobacteria	23.20%
Bacteroidetes	17.90%
Acidobacteria	10.10%
Firmicutes	7.07%
Cyanobacteria	1.97%
Verrucomicrobia	1.72%
Gemmatimonadetes	1.30%
unclassified	0.55%
Armatimonadetes	0.44%
Chloroflexi	0.42%

# Summary

- 1) Create data table with each axis as a column
- 2) Add OTU taxonomy
- 3) Add sample metadata to data table
- 4) Order taxonomic groups
- 5) Plot with ggplot2
